récriminer contre l'antiquité? Il demeure
vrai qu'une longue traînée de
persécutions traverse tous les âges de
l'église; les guerres de religion ont fait

verser autant de larmes et de sang que les guerres politiques ou nationales, et depuis le christianisme, les haines dogmatiques et sectaires ont pris trop souvent une amertume, une fureur que les temps anciens ont ignorée; c'est au point qu'elles se sont donné une langue à part, dont le vocabulaire d'anathèmes s'est rapidement enrichi, et une juridiction, une jurisprudence à part, dont l'inquisition est le dernier mot. This book presents a comprehensive overview of selected research concerning global and comparative trends in dominant discourses on human rights education. Using diverse paradigms, ranging from critical theory to historical-comparative research, the

book examines major human rights education reforms and policy issues in a global culture with a focus on the ambivalent and problematic relationship between human rights education discourses, ideology and the state. Further, it discusses democracy, national identity, and social justice, which are among the most critical and significant factors defining and contextualising the processes surrounding nation-building, identity politics and human rights education globally, and also critiques current human rights education practices and policy reforms, illustrating the shifts in the relationship between the state and human rights education policy. Written by authors from diverse backgrounds and regions, the book examines current developments in

research concerning human rights education, and citizenship education globally. As such it enables readers to gain a more holistic understanding of the nexus between nation-state, national identity and human rights education both locally and globally. It also provides an easily accessible, practical yet scholarly insights into international concerns in the field of human rights education in the context of global culture.

Mycorrhizal Mediation of Soil: Fertility, Structure, and Carbon Storage offers a better understanding of mycorrhizal mediation that will help inform earth system models and subsequently improve the accuracy of global carbon model predictions. Mycorrhizas transport tremendous quantities of plant-derived carbon below ground and are increasingly recognized for their importance in the creation, structure, and function of soils. Different global carbon models vary widely in their predictions of the dynamics of the terrestrial carbon pool, ranging from a large sink to a large source. This edited book presents a unique synthesis of the

influence of environmental change on mycorrhizas across a wide range of ecosystems, as well as a clear examination of new discoveries and challenges for the future, to inform land management practices that preserve or increase below ground carbon storage. Synthesizes the abundance of research on the influence of environmental change on mycorrhizas across a wide range of ecosystems from a variety of leading international researchers Focuses on the specific role of mycorrhizal fungi in soil processes, with an emphasis on soil development and carbon storage, including coverage of cutting-edge methods and perspectives Includes a chapter in each section on future avenues for further study

Dictionary Kluwer Law International B.V. With this Festschrift, the Bahrain Chamber for Dispute Resolution (BCDR-AAA) is starting a tradition of honoring Arab scholars and practitioners who promote international arbitration and international law. Over the last few decades, international arbitration institutions and international law societies have generously acknowledged the work of leading scholars and practitioners from the region. The time has come, however, for these individuals to be honored by institutions within the region. It should come as no surprise that the BCDR-AAA is dedicating this first Festschrift to Professor Dr. Ahmed El-Kosheri. His immense contributions to international commercial arbitration, international investment arbitration, and

international law more broadly, as well as his significant influence on a generation of lawyers and students from the Arab region and beyond, fully justify this choice. As a testament to Dr. El-Kosheri's remarkable career, broad intellectual horizons and extensive geographical reach, the Festschrift includes contributions from forty-six authors-judges, arbitrators, practitioners and scholars-representing twenty-one nationalities from the Middle East, North and Western Africa, East Asia, Europe, and North and South America, who wrote on topics as diverse as international arbitration and ADR mechanisms, international investment law, public international law (including international administrative law), and private international law in Arabic, English, and

French. One can hardly think of another Arab figure who has done more than Dr. El-Kosheri to strengthen international law while bridging legal-cultural divides between the Arab region and the rest of the world. He will undoubtedly continue to inspire many generations to come.

Though one of the most important public health agencies of the 20th century and the most powerful and richest branch of the Rockefeller Foundation, the International Health Division's history (1913-1951) has never been told before. This original work is based on a vast multitude of letters, reports and photographs the author uncovered in the Rockefeller Archives. Farley describes the internal struggles and the conflicts with foreign and US governments of the "medical barons" who ran the organization as they set its goals and tried to eradicate some of the world's most serious diseases. He also describes the first testing of DDT and the

preparation for the US army of a yellow fever vaccine that turned out to be contaminated. He takes the reader into the often byzantine world where the organization endowed schools of public health and nursing in such diverse places as London, Toronto, fascist Rome, militaristic Tokyo, and Calcutta in the dying days of the British Raj. Farley enlivens the book with sketches of the personalities and prejudices of those who worked in the Division and of the scandals that rocked it from time to time. He shows that in the continuing debate between those who believe that disease is the root cause of ill health and poverty and those who see poverty as the primary cause, the Division remained firmly in the former position. He also shows that after it closed, former

members exerted considerable influence on the development of the World Health Organization. Opposing some recent historians, Farley argues against the view that the Health Division served as an advance guard for American capitalism. His lively book will be welcomed by all who are interested in the history of public health, tropical disease, and medical institutions.

Abstract: The chapters in this book represent papers presented at the First International Conference on the Modulation and Mediation of Cancer by Vitamins held in Tucson, Arizona in 1982. The authors are from the sciences of cell biology, biochemistry, nutrition, epidemiology and oncology. Both prevention and treatment of cancer using vitamins are explored, and the results of clinical trials are presented. The vitamins investigated were: vitamin A and carotenoids, vitamin C, vitamin E, vitamin D and vitamin K. Most of the studies involved animals or animal

tissues. The prospective clinical trials used vitamin A or its synthetic derivations for cancer treatment. (as).

In this book the latest data available on transduction mechanisms of drug stimuli are presented. A common theme underlying the chapter in this volume is the recognition that drugs can act as stimuli, in much the same manner as external events do. Accordingly, the papers focus on the mechanisms by which these stimuli are transduced at different levels of analysis, such as the behavioral, pharmacological, and molecular levels. Some chapters discuss the mechanisms of transduction of the discriminative effects of several important classes of drugs, while others deal with the methods and research

strategies by which these mechanisms can be analyzed. Collectively, the papers in this volume reflect the current status of knowledge in the rapidly expanding field of behavioral pharmacology.
