A Birder's West Indies Taylor & Francis

The West Indies offer so much more than sun, sand, and shopping. This sweeping arc of islands, which runs from Cuba to Grenada and includes the Virgin Islands, teems with a rich diversity of plant and animal life. Up to 40 percent of the plants in some forests are found nowhere else on earth, while the West Indian flyway is a critical link in the migratory routes of many birds. In *A Birder's West Indies*, Roland Wauer takes you on an island-by-island journey of discovery. He describes the unique natural features of each island and recounts his often fascinating experiences in seeking out the nearly 400 species of birds known in the West Indies. His accounts give insight into the birds' habitats, status, and ecology and record some of the threats posed by human activities. For readers planning trips to the West Indies, Wauer also includes helpful, up-to-date facts about the best times to travel, the kinds of entry and customs systems to expect, the money exchange services available, and general information about weather, food, and accommodations. Filling a unique niche among current guides, *A Birder's West Indies* offers both professional ornithologists and avocational bird watchers a chance to compare notes and experiences with an expert observer. And for readers who haven't yet visited the islands, Wauer's fluid prose and lovely color photographs will be the next-best thing to being there—and an irresistible invitation to go.

Asthma is a common complex and heterogeneous respiratory disease with an increasing prevalence in developed countries. Asthma is a disease consisting of different phenotypes that are driven by different mechanistic pathways (endotypes). The recognition of these phenotypes and endotypes is central to asthma management entailing prognostic and therapeutic implications. It is acknowledged that despite optimal treatment, many patients are poorly controlled, highlighting the need for phenotype-guided treatments. In this context, the emergence of novel therapies (monoclonal antibody therapy, bronchial thermoplasty) is paving the way for personalized asthma therapy. A better understanding of disease pathogenesis may enable the identification of biomarkers, mediators, novel therapeutic targets, and treatable traits. Further molecular phenotyping or endotyping of asthma will be necessary to tailor new therapeutic strategies. The present Special Issue on Asthma aims to provide the current knowledge on phenotypes and endotypes in appreciating and managing the heterogeneous condition that is asthma.

An Administrator's Guide to Online Education is an essential resource for the higher education administrator. Throughout the text, the authors provide case studies, examples, policies, and resources from actual institutions, which further enhance the value of this text. An Administrator's Guide to Online Education, encompasses the issues and provides information on how to accomplish one specific task: successful online education administration.

Designated a Doody's Core Title! The Preeminent Nursing

Terminology Classification System "The Clinical Care Classification (CCC) System described in this manual is the only standard coded nursing terminology that is based on sound research using the nursing process model framework and that meets the Patient Medical Record Information (PMRI) comparability requirement. The CCC System allows patient care data generated by nurses to be incorporated into the PMRI database, and enables nurses' contributions to patient outcomes to be studied and acknowledged." -- From the Foreword by Sheryl L. Taylor, BSN, RN, Senior Consultant, Farrell Associates TESTIMONIES: "ABC Coding Solutions-Alternative Link developed ABC codes for nursing in collaboration with Dr. Virginia Saba, developer of the CCC system. Approximately two hundred ABC codes were developed from the CCC System of Nursing Interventions to accurately document nursing and integrative health care processes, classify and track clinical care, and develop evidence-based practice models, thus filling significant gaps in older medical code sets." --Connie Koshewa, Practitioner Relations Director, ABC Coding Solutions-Alternative Link "The International Classification for Nursing Practice (ICNPÆ) is a program of the International Council of Nurses (ICN). One of the first steps in the development of the ICNPÆ was to collect and compare all the nursing concepts in existing nursing terminologies, including the CCC. To facilitate the goal of ICNPÆ as a unified nursing language system, a project is under way to map the CCC to the ICNPÆ Version 1.0. This work will facilitate evaluation and ongoing development of both terminologies and allow ICN to compare data using CCC codes with data from other standard nursing terminologies." --Amy Coenen, PhD, RN, FAAN, Director, ICNPÆ Program, International Council of Nurses
