Ikigai National Geographic Books

Yuzu and Mei may be step-sisters, but that's about all the two girls have in common. Yuzu is an outgoing girly-girl who cares more about fashion than school work, while Mei is the serious student council president. Yet despite their differences, or perhaps because of them, the two girls find themselves drawn to each other... Mei has been running herself ragged trying to oversee the school, and Yuzu is worried about her. When Mei's dad comes home from a business trip, however, it looks like the cavalry has arrived. Unfortunately, his presence opens up old wounds between father and daughter, and Yuzu finds herself caught in the middle. Will Yuzu put aside her feelings for Mei to help fix this family feud?

Tracing the history of intercultural struggle and cooperation in the citrus belt of Greater Los Angeles, Matt Garcia explores the social and cultural forces that helped make the city the expansive and diverse metropolis that it is today. As the citrus-growing regions of the San Gabriel and Pomona Valleys in eastern Los Angeles County expanded during the early twentieth century, the agricultural industry there developed along segregated lines, primarily between white landowners and Mexican and Asian laborers. Initially, these communities were sharply divided. But Los Angeles, unlike other agricultural regions, saw important opportunities for intercultural exchange develop around the arts and within multiethnic community groups. Whether fostered in such informal settings as dance halls and theaters or in such formal organizations as the Intercultural Council of Claremont or the Southern California Unity Leagues, these interethnic encounters formed the basis for political cooperation to address labor discrimination and solve problems of residential and educational segregation. Though intercultural collaborations were not always successful, Garcia argues that they constitute an important chapter not only in Southern California's social and cultural development but also in the larger history of American race relations.

Citrus Vol. 2 National Geographic Books

Walk into your local grocery store and down the produce aisle, and you'll find a dazzling array of citrus, from navel oranges and clementines to grapefruit and key limes—and sometimes even more exotic fare like the Japanese yuzu or the baboon lemon. Nearly 100 million tons of citrus are produced globally every year, but where did these fruits first come from? How did they find their way into the Western world? And how did they become both a culinary and cultural phenomenon? Pierre Laszlo here traces the spectacular rise and spread of citrus across the globe: from Southeast Asia in 4000 BC through North Africa and the Roman Empire to early modern Spain and Portugal,

whose explorers introduced the fruits to the Americas during the 1500s. Blending scientific rigor with personal curiosity, Citrus ransacks over two millennia of world history, exploring the numerous roles that citrus has played in agriculture, horticulture, cooking, nutrition, religion, and art—from the Jewish feast of the Tabernacles through the gardens and courts of Versailles to the canvasses of Vincent van Gogh to the orange groves of southern California and the juicing industry of today. “Laszlo . . . has approached the lore of citrus fruit with the élan of a master chef (the man is French, after all), mixing history, economics, biology and chemistry to produce a book that will bring a smile to readers of every taste.”—Natural History “Altogether charming, eccentric, erudite, and definitely worth the price.”—Times Higher Education Supplement “Stimulating. . . . Laszlo shows that the citrus fruit ‘is a treasure trove of chemicals that are highly useful to humankind’—which also happens to taste wonderful.”—Sunday Times (UK) “A short but brilliant account of 6,000 years of citrus fruits that should be devoured with fervor.”—Financial Times “Did you know there are a billion citrus trees under cultivation, or that grapefruit juice may potentiate the effects of Viagra? Citrus mines over two millennia of history to explore the spread of these fruits out of Asia, their commercialization in the United States, and enduring symbolism the world over.”—New Scientist

Japanese Food Made Easy National Geographic Books

Citrus juices are the most common among the fruit juices around the world and constitute a major portion of the food industry. Even though juice-processing technology has been around for many years, interest in historical and modern innovations and applications is widespread. New juice enterprises are springing up constantly all over the world. Old enterprises are constantly undergoing change, growth, and development. The Internet has expanded the reach of many, not only for information but for marketing and production alterations. The World Wide Web has made the wide world one. Computer technology alone is growing faster than the oranges on the trees. With these multifaceted changes, a need has emerged for an update to the first edition of *Citrus Processing*. The second edition of *Citrus Processing* has expanded its scope beyond the quality control theme of the first edition. I have used a more holistic approach to the subject of citrus processing. Those using this text in the classroom will find it more comprehensive in its treatment

of the subject. The first edition targeted the industrial technologist. The second edition approaches citrus processing as a complete subject, assuming an audience interested in learning from the ground up. This new approach should be particularly appealing to those unfamiliar with the industry. Even so, experienced industrialists will find the information contained here contemporary, futuristic, and fundamental.

When We Cease to Understand the World National Geographic Books

This book covers the biotechnology of all the major fruit and nut species. Since the very successful first edition of this book in 2004, there has been rapid progress for many fruit and nut species in

cell culture, genomics and genetic transformation, especially for citrus and papaya. This book covers both these cutting-edge technologies and regeneration pathways, protoplast culture, in vitro mutagenesis, ploidy manipulation techniques that have been applied to a wider range of species. Three crop species, *Diospyros kaki* (persimmon), *Punica granatum* (pomegranate) and *Eriobotrya japonica* (loquat) are included for the first time. The chapters are organized by plant family to make it easier to make comparisons and exploitation of work with related species. Each chapter discusses the plant family and the related wild species for 38 crop species, and has colour illustrations. It is essential for scientists and post graduate students who are engaged in the improvement of fruit, nut and plantation crops.
