Many aircraft, some famous and some rare, gained a reputation for being difficult to fly and sometimes downright dangerous. This book looks at some of the worst culprits over a period spanning World War One to the age of supersonic

flight. The following aircraft are included. BE.2 - The RFC went to war in it in 1914. The BE was easy to fly and very stable - but it was difficult to maneuver and very easy to shoot down. Tarrant Tabor - The Tabor was grotesque, a massive misfit of an experimental bomber that predictably came to grief on its first flight. Avro Manchester - The twin-engined Manchester would fly all the way to Berlin and back - only to burst into flames over its own base. Messerschmitt Me 210 - The Me 210 was developed as a successor to Goering's Destroyer, the Bf110. It was a disaster with a phenomenal accident rate. Martin B-26 Marauder - They called the B-26 the Widow-maker, fast and powerful, with some savage characteristics.

Reichenberg IV - a manned version of the V-1 flying bomb, was a desperation weapon, its pilots intended to fly suicide missions against Allied shipping. Tu-144 - Rushed prematurely into its test program to beat the Anglo-French Concorde, the TU-144 was intended to be Russia's supersonic dream.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an

introduction and extensive background notes by the modern English historian Paul Harris.

This book provides specialists and executives with a clear, yet practical set of recommendations to meet the challenges of digital transformation and ensure long-term success as a leader in a primarily digital business world. The

authors describe the fundamental principles of digitization and its economic opportunities and risks, integrating them into a framework of classic and new management methods. The book also explores how increasing digitization - not only of communication, but of complete value chains - has led to a need to establish a digital business leadership. Digitization is changing people and markets: it causes the upheaval of entire industries, creates new digital-centric companies, and forces established companies to cope with the transformation activities associated with these digitization processes. New approaches and methods have to be learned, tried and tested patterns of thinking have to be explored, and last but not least, innovation activities have to be understood as continuous necessities. At the same time, digital business offers considerable opportunities for renewing competitive advantages, improving existing process structures and realigning products, services and business models.
