Offers a comprehensive and practical reference guide to antenna design and engineering for portable devices. Antennas are often the most bulky components in many portable wireless devices such as mobile phones. Whilst the demand for ever smaller and more powerful wireless devices increases, as does the importance of designing and engineering smaller antennas to fit these devices. *Antennas for Portable Devices* provides a complete and cutting-edge guide to the design and engineering of small antennas for portable electronic devices such as mobile phone handsets, laptop computers, RFID (radio frequency identification), microwave thermal therapies devices, wearable devices, and UWB (ultra-wideband) based consumer devices. The book addresses practical engineering issues that antenna

professionals have to deal with. It explains the immediate demands for existing systems; discusses the antenna technology for the latest and emerging applications, and gives comprehensive coverage of hot topics in the wireless industry. Issues including design considerations, engineering design, measurement setup and methodology, and practical applications are all covered in depth. *Antennas for Portable Devices: Covers antennas for all modern portable wireless devices from handsets, RFID tags, laptops, wearable sensors, UWB-based wireless USB dongles and handheld microwave treatment devices* Explains how to design and engineer applications for miniaturization of antenna technology, utilising practical case studies to provide the reader with an understanding of systems and design skills. Links the basic antenna theory, with design methodology, and engineering design. Is amply illustrated with numerous figures and data tables of antenna designs to aid understanding. Features contributions from industry and research experts in antenna technology and applications. This invaluable resource will provide a comprehensive overview of miniaturizing antenna technology for antenna engineers in industry, and R&D organizations, graduate students, consultants,

researchers, RF professionals, technical managers, as well as practitioners working in the area of consumer electronics, RF systems, wireless communications, or bio-medical devices.

Concurrency is an integral part of everyday life. The concept is so

ingrained in our existence that we benefit from it without realizing. When faced with a taxing problem, we automatically involve others to solve it more easily. Such concurrent solutions to a complex problem may, however, not be quite straightforward and communication becomes crucial to ensure the successful solution of the problem.

Before reading my private 'confessions'\* please bear in mind the following: (1) My husband Joe and I are soul-mates.

Nothing - including a smouldering lone father or Joe's teeny mid-life crisis - could ever come between us. (Hopefully he won't find out about smouldering Lone Father's sexed-up exposé of our secret 'affair' last year.) (2) Offspring Katie and Jack are well-adjusted and happy - even if Jack thinks he's a dog and Katie wants to be a Pussy Cat Doll. (3) VBF Louise makes new motherhood appear unnaturally glamorous. It simply isn't normal to fit back into size zero jeans so soon after giving birth - and I have the jelly belly to prove it. (4) I did not cynically engineer my close personal friendship with Celebrity Mom Angelica Law just to get invited to red carpet events. The whole newspaper-paparazzi-thing was NOT my fault - I can't help it if I've got star quality in bucket-loads, can I? \*Note: The publisher 'borrowing' my diary and printing its contents does not amount to a confession. My arm had to be twisted very hard ...

How are we as Christians called to respond when cancer invades our lives, whether our own bodies or those of our friends and family? On the eve of his

own cancer surgery, John Piper writes about cancer as an opportunity to glorify God. With pastoral sensitivity, compassion, and strength, Piper gently but firmly acknowledges that we can indeed waste our cancer when we don't see how it is God's good plan for us and a hope-filled path for making much of Jesus. *Don't Waste Your Cancer* is for anyone touched by a life-threatening illness. It first appeared as an appendix in *Suffering and the Sovereignty of God*. Repackaged and republished, it will serve as a hope-giving resource for healthcare workers, pastors, counselors, and others caring for those with cancer and other serious illnesses. The booklets are also available in packs of ten.

A defining collection from Alistair Cooke's legendary BBC Radio broadcasts, guiding us through nearly sixty years of changing life in the United States 'No one else succeeded in explaining to the English-speaking world ... the idiosyncrasies of a country at once so familiar, and yet so utterly foreign' Independent When Alistair Cooke retired in February 2004 he was acclaimed as one of the greatest broadcasters of all time. His Letter from America radio series, which began in 1946 and

continued every week for fifty-eight years until his retirement, kept the world in touch with what was happening in America. Cooke's wry, humane and liberal style both informed and entertained his audience. The selection here, made largely by Cooke himself and supplemented by his literary executor, gives us the very best of these legendary broadcasts. It covers key moments from the assassination of Kennedy through to the Vietnam War and Watergate to 9/11, the Iraq War and anticipates the 2004 elections. It includes portraits of the great and the good from Charlie Chaplin to Martin Luther King, Jr, and topics as varied as civil rights, golf, jazz and the changing colours of a New England fall. Each Letter contributes to a captivating portrait of a nation - and of a man.

Ecology - unlike astronomy, physics, or chemistry - is a science with an associated political and ethical movement: the Green Movement. As a result, the ecological position is often accompanied by appeals to holism, and by a mystical quasi-religious conception of the ecosystem. In this title, first published in 1988, Andrew Brennan argues that we can reduce much of the mysticism surrounding ecological discussions by placing them within a larger context, and illustrating that our individual interests are bound with larger, community interests. Using an interdisciplinary approach, which bridges the gap between the sciences, philosophy, and ethics, this is an accessible title, which will be of particular value to students with an interest in the philosophy of environmental science and ethics.

From the word "Magi" came the term

"Magic," which Webster has defined as follows: "The hidden wisdom supposed to be possessed by the Magi; relating to the occult powers of nature; mastery of secret forces in nature; having extraordinary properties; seemingly requiring more than human power, etc." So we may consider the word "magic" to mean: "mastery of the occult forces of nature," the term indicating the existence of such forces, and the possibility of the mastery or control of them. And in ancient times, "magic" was always believed to be connected in some way with the use of the mind, particularly in its aspects of will, desire, and imagination. Effects were believed to result because some magician either "willed it"; "desired it to be"; or else "imagined it would occur";-in each case the result happening as a materialization of the mental conception or wish. "Wishing" was always believed to be a magical operation, and if we examine a "wish" we see it is composed of the use of the imagination, coupled with desire, and backed up with will.

 Wal-Mart isn't just the world's biggest company, it is probably the world's most written-about. But no book until this one has managed to penetrate its wall of silence or go beyond the usual polemics to analyze its actual effects on its customers, workers, and suppliers. Drawing on unprecedented interviews with former Wal-Mart executives and a wealth of staggering data (e.g., Americans spend \$36 million an hour at Wal-Mart stores, and in 2004 its growth alone was bigger than the total revenue of 469 of the Fortune 500), *The Wal-Mart Effect* is an intimate look at a business that is dramatically reshaping our lives.

The Laboratory of Hyperbaric Physiology of the Medical Clinic of the University of Zurich came into existence in 1960 thanks to private initiative and a readiness to undertake risks; the success ful start was made possible with help from the French Navy and the United States Navy. A prerequisite for the development of the laboratory was also the benevolence of the authorities of the University of Zurich toward a research project from which scarcely any practical use could be expected for the land-locked country of Switzerland. The development of the laboratory and the systematic research were supported generously from 1964 by Shell Internationale Petroleum Maatschappij of The Hague. The basic theme of the research was always the well-being and functional ability of the human being in an atmosphere of abnormal pressure and or abnormal composition. Many connections became obvious with respiratory physiology, circulatory physiology, and physiology at great heights, and close contact with other special laboratories of the Medical Clinic proved very valuable. With a relatively small number of steady collaborators it was possible to master an extensive experimental program. Special thanks are due to Mr. Benno Schenk, who as technical head was responsible for the exact performance of all the hyperbaric experiments.

This report presents the results of the project Safe Future Inland Transport Systems (SafeFITS), which aims to

develop a robust road safety decision-making tool to support the most appropriate road safety policies and measures to achieve tangible results. Road accidents constitute a major social problem in modern societies, accounting for more than 1 million accidents per year in EU-28 (2,900 per day), resulting in 1.4 million injuries and 26,000 fatalities. Current trends suggest that, unless action is taken, traffic injuries will become the fifth leading cause of death by 2030, with the disparity between high-income and low-income countries further increased.
